April 2014- March 2016

v0.2

Integrated Urgent Care Centre	Urgent Care
--------------------------------------	--------------------

Description	<p>Evidence Base</p> <ul style="list-style-type: none"> • East Kent Integrated Care Pilot 2009 • ECIST review of the Urgent Care System 2010 • Clinical Systems Model for Integrated Urgent Care and Long Term Conditions 2012 • Kings Fund review of Urgent and Emergency Care NHS South of England 2013. <p>Key Changes</p> <ul style="list-style-type: none"> • enhanced GP out of hours service to replicate what is provided in hours; • enhanced input to review and treat patients within care homes, reducing the need to access acute hospital services; • consistently responsive and reliable service 24/7; • integration of the out of hours service with other care providers; • clear discharge processes from urgent care to planned or primary care, to maintain capacity within the system; and • proactive case management. <p>High Level Benefit Assessment</p> <ul style="list-style-type: none"> • Provide a rapid multi-disciplinary assessment of patients quickly • Provide rapid access to a range of services that will ensure that patients are managed seamlessly and are better supported to cope within their local community. <p>Key Risks</p> <ul style="list-style-type: none"> • Quality / complaints • Human resources / organisational development / staffing / competence • Adverse publicity / reputation
--------------------	--

NHS Outcomes Framework

1	2	3	4	5
Preventing people from dying prematurely	Enhancing quality of life for people with long-term conditions	Helping people to recover from episodes of ill health or following injury	Ensuring that people have a positive experience of care	Treating and caring for people in a safe environment and protecting them from avoidable harm
Securing additional years of life for people with treatable mental and physical health conditions.	Improving the health related quality of people with one or more long-term condition, including mental health conditions.	Reducing the amount of time people spend avoidably in hospital through better and more integrated care in the community, outside of hospital.	Increasing the proportion of older people living independently at home following discharge from hospital.	Increasing the number of people with mental and physical health conditions having a positive experience of hospital care.
			Increasing the number of people with mental and physical health conditions having a positive experience of care outside hospital, in general practice and in the community.	Making significant progress towards eliminating avoidable deaths in our hospitals caused by problems in care.

Autistic Spectrum Conditions Diagnostic Assessment Service

Learning Disabilities

Description

Strategic Fit

- It was identified in 2010 that there was no clear diagnostic or care pathway for adults with high functioning autism and Aspergers syndrome in Kent
- The current capacity of the service is 60 diagnostic assessments a year, and the waiting list as of July was 280 patients

Evidence Base

- NICE quality standards

Key Changes

- Increase capacity for assessment service

High Level Benefit Assessment

- The backlog of people waiting for diagnostic assessment will be addressed
- There will be improved multi disciplinary working including the provision of joint health and social care assessment meetings and specialist interventions
- Formal diagnosis ensures individuals are not referred to inappropriate health, social care and community and voluntary services.
- Carers and families will have a greater understanding of autism as a result of the development of this service.
- The service would meet key requirements of national policy and guidance.

Key Risks

- Risk that current level of referrals may not be a true representation of future demand for service – the prevalence data suggests referrals could continue to increase
- Risk that current provider cannot sustain current service which may pre-empt closure of the current service.

Winterbourne Joint Plan

Learning Disabilities

Description

Evidence Base

- The *Winterbourne Concordat: Programme of Action* (DH 2012)

Key Changes

- Agree a personal plan for each individual that is inappropriately placed in CCG or NHS England commissioned learning disability or autism in-patient services and put the plans into action so that all individuals receive personalised care and support in the community no later than 1 June 2014
- Put in place a locally agreed joint plan for high quality care and support services by April 2014, which accords with the model of good care to ensure that a new generation of inpatients do not take the place of people currently in hospital.

High Level Benefit Assessment

- People with learning disability and autism who have complex mental health or behaviour problems will experience more integrated care and support in the community
- There will be improved multi-disciplinary working including the provision of joint health and social care assessment meetings and specialist interventions
- There will be reduced reliance on the use of high cost in-patient services
- Clinical consultancy and support would be available for other professionals in mainstream services to enable them to make reasonable adjustments.
- The service would meet key requirements of national policy and guidance.

Key Risks

- Lack of funding from NHSE Specialised Commissioning renders commissioning recommendations unaffordable for CCGs and Local Authority
- June 2014 deadline for discharges of current in-patients not met due to requirement to undertake procurement process for new services

NHS Outcomes Framework

1		2		3		4		5

Multi-agency whole system approach for supporting disabled children and young people with challenging behaviour

Child Health and Maternity

Description

Strategic Fit

- Kent Health and Wellbeing Strategy

Evidence Base

- Department of Health’s Report into Winterbourne View
- Children and Families Bill
- Kent Sufficiency Strategy (2013)

Key Changes

- A new multi-agency integrated pathway involving professionals working at universal, targeted, specialist and highly specialist levels Integrated assessments and care planning process aligned to the new Education Health and Care plans

High Level Benefit Assessment

- Children and young people are able to remain living at home with their families.
- Children and young people are educated in a Kent school.
- Children and young people are able to maintain or develop friendships and access local community services.
- Families feel confident in managing their son or daughter’s challenging behaviour and are able to participate in everyday activities.

Key Risks

- Delay in recruiting the right staff with the right level of training and experience.
- Unable to agree contract variation to support the implementation of the transformation programme.
- Decision by any partner not to invest in this transformation programme.

Transformational of Urgent Care for Children and Young People

Child Health and Maternity

Description

Evidence Base

- DH and DfE, Improving Children and Young People’s Health Outcomes – a system wide response (2013)
- DH, Report of Children and Young People’s Health Outcomes Forum (2012)
- RCGP in partnership with RCPC and RCN, Commissioning a good child health service (2013)
- Standards for children and young people in emergency care settings (2012)
- NHS Institute for Innovation and Improvement, Focus on: Children and Young People Emergency and Urgent Care (2010)

Key Changes

- New urgent and emergency care clinical network for children and young people
- Use of assistive technology
- Working with Public Health and the School Nursing Service to deliver key messages in schools.
- Develop lesson plans for use in schools around PSHE.

High Level Benefit Assessment

- Parents have an increased level of awareness and confidence in being able to support their children with common illnesses which may require urgent or emergency care.
- Children and young people, where it is clinically safe are treated and supported outside of hospital in their local community.
- Increase in confidence to manage their condition.

Key Risks

- Destabilisation of services
- Lack of engagement
- Services not streamlined
- Efficiencies and quality not meeting expectations

Memory Assessment	Long Term Conditions					
<p>Description</p>	<p>Strategic Fit</p> <ul style="list-style-type: none"> The provision of early diagnosis for people with dementia is identified as an objective in the National Dementia Strategy 2009 Prime Minister’s Dementia Challenge, 2012 which sets a target diagnosis rate of 66% by 2015 (against expected prevalence). <p>Key Changes</p> <ul style="list-style-type: none"> The pathway envisages in future that the majority of people with dementia will be reviewed and monitored in primary care. Dementia screening should be undertaken in primary care to exclude other reasons for the cognitive impairment Magnetic resonance imaging (MRI) is suggested as the preferred modality to assist with early diagnosis and detect subcortical vascular changes, the suggestion would be that the scan should be ordered in primary care. <p>High Level Benefit Assessment</p> <ul style="list-style-type: none"> Care closer to home by increasing the assessment and treatment available in primary care. A more multi disciplinary approach to patients will also help to support the integration of services Free up capacity in the memory assessment service for those people who need more specialist input <p>Key Risks</p> <ul style="list-style-type: none"> Redesign of pathway does not increase capacity in memory assessment services leading to delays in assessment. Future modelling of local tariffs and activity indicate current budget is insufficient. Prescribing will continue to be a cost pressure unless appropriate agreements are reached.

Dementia Out Of Hours Crisis Support		Long Term Conditions					
Description	<p>Strategic Fit</p> <ul style="list-style-type: none"> • Dementia has been identified as a priority for the Kent HWB as well as the CCG. The business supports the desire to deliver care as close to home as possible. • The provision of good community support for people with dementia is identified as an objective in the National Dementia Strategy, 2009 and the Prime Ministers Dementia Challenge, 2012. <p>Key Changes</p> <ul style="list-style-type: none"> • The proposal is to develop existing community services • This enhanced service would provide an out of hours response for both older people with functional problems as well as people with dementia • The service would be available to both patients known to the secondary mental health services and new referrals and would deliver a service to individuals in their own homes, including care homes • The service will be targeted at those patients requiring an urgent response from mental health services and those patients who needs may require a joint response between community nursing and mental health services because a physical problem has enhanced their level of confusion. <p>High Level Benefit Assessment</p> <ul style="list-style-type: none"> • Enable older people to remain in their own home (which could be a care home) at times of crisis. • Avoid unnecessary hospital attendances and admissions. • Facilitate hospital discharge <p>Key Risks</p> <ul style="list-style-type: none"> • Inability recruit to additional posts will impact on service delivery • Service does not ultimately deliver savings.
